

Tri-city F.A.S.T. Center announces
Positive Pressure Attack: Theory and Application

October 7th 0800-1700
October 8th 0800-1700

Battalion Chief Kriss Garcia and Battalion Chief (Ret.) Reinhard Kauffmann, Salt Lake City (UT) Fire Department

In the past two decades, lightweight building construction methods and the use of manmade materials in construction and furnishings have become increasingly more common. The time until structural failure can be expected in a fire has been reduced, and firefighters have seen hotter fires that generate higher levels of deadly gasses.

But the ventilation methods used by modern firefighters have not kept pace.

Positive pressure attack (PPA), proven on the fireground, allows for a coordinated and systematic approach to hoseline and ventilation operations.

This program covers the mechanics and the basics of PPV, precautions surrounding its use, and presents methods for incorporating PPV without delaying the initial fire attack.

Full PPE with SCBA is required.

Class will be conducted once each day, half day classroom and half day hands-on.

Cost \$50.00
